

Subtract More Than 4 Digits

1. Circle the correct answer to the calculation below.

- 4,732
 3,772
 3,732

VF

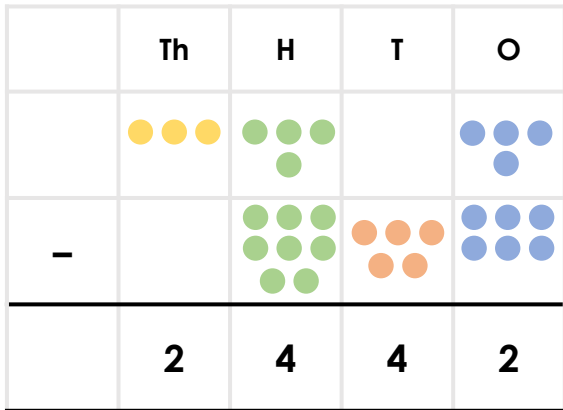

4. Gem has used column subtraction to solve the calculation below.

Is she correct? Explain how you know.

R

2. Spot and correct the mistakes.

VF

5. Help Kai complete the calculation.

The largest number must have a zero in the hundreds column and there must be two exchanges.

Find two possible ways.

PS

3. Complete the calculation below using the column method.

$$7,035 - \underline{\quad\quad\quad} = 1,648$$

VF

6. Identify the missing digits in the calculation below.

PS

Subtract More Than 4 Digits

1. 3,732 is the correct answer.
2. The hundreds and the ones have been subtracted incorrectly. The correct answer is 2,548.
3. $7,035 - 1,648 = 5,387$. The missing number is 5,387.
4. Gem is incorrect because she has exchanged incorrectly. As there are no hundreds, Gem should have exchanged a thousand for ten hundreds, which would allow her to exchange a hundred for ten tens. The correct answer is 5,071.
5. Various answers, for example: $8,073 - 3,438 = 4,635$ and $9,063 - 4,428 = 4,635$
6. $8,207 - 5,364 = 2,843$
